Surrounding Density and Diverse Uses
8/8 points; 1 Regional Priority credit

Accessibility to Quality Transit
17/7 points; 1 Regional Priority credit

Building Product Disclosure and Optimization - Material Ingredients

LEED for Commercial Interiors

Design for Active Occupants

The Four Systems

Managed System

Social System

The concept behind the design, prioritizing interaction among cowork members, was driven by the use of the space to create a more productive work environment. The building was designed to encourage social interaction and collaboration by promoting easy access to diverse spaces for workers to access such as lunch spots and postal offices, with vertical and horizontal circulation being key features. The design strategy of the Building Product Disclosure and Optimization - Material Ingredients credit was the right choice for Interface Cowork and was selected as 1 Regional Priority credit. The goal was to reduce the amount of potable water that becomes gray or black water. It is required for LEED Certification.

Managed System

Social System

The location of Interface Cowork is in a being environmentally sustainable, because of the local space in which it is located. It is surrounded by diverse spaces for workers to access such as lunch spots and postal offices, all while maintaining a strong relationship with the community. The building is designed to capture and store water harvested from the roof and surrounding areas. The design strategy of the LEED for Commercial Interiors certification was selected for Interface Cowork and was selected as a Regional Priority credit.
