

University of Arkansas Green Buildings - FY '20

Overview

This report outlines green building certifications at the University of Arkansas: Green Globes and Leadership in Energy & Environmental Design. In 2007, the university committed to building all new construction and major renovation projects to meet LEED Silver requirements as part of the UA's commitment to the American College and Universities Presidents' Climate Commitment. These certification programs are third party verification systems. Over 1.5 million gross square feet (GSF) of green building space was constructed between FY 2004 and 2020.

Green Building Certification Systems Defined

Leadership in Energy & Environmental Design (LEED)

Building projects earn points to achieve different levels of certification. LEED certification provides strategies to achieve high performance in key areas of human and environmental health, sustainable site development, water savings, energy efficiency, materials selection and indoor environmental quality. Certification levels are Certified, Silver, Gold and Platinum.

Green Globes

A streamlined, online assessment and rating tool that automatically generates a report, ratings, achievements, and recommendations through a questionnaire. Buildings that achieve 35% or more of the 1,000 points possible in the Green Globes rating system are eligible candidates for a certification of one, two, three, or four Green Globes.

Green Building Inventory

The University of Arkansas constructed twenty five certified buildings since FY 2004, totaling 1,561,856 GSF that belongs to certified green buildings (Table 1). This represents 15% of the total campus GSF (Figure 1).
